

Dell S520 Interactive Projector Instructions for Windows

The Dell S520 Interactive Projector is in room 207 Willard Hall Education Building. We recommend that you download the driver and test with your computer before your presentation.

1. Press power button on the remote, in the caddy next to the board, one time to turn on projector. Do not press the power button on the projector.
2. Plug in the VGA cable attached to the projector to the computer you're using. This may require an adapter, depending on your specific model of computer.
3. Make sure your desktop shows on the projector screen; you may need to change your display properties to clone/mirror your desktop.
4. Plug in the USB cable to an open USB port on your computer.
5. Run Touch Driver from autorun or from Computer. Download the driver from <http://www.dell.com/support/home/lc/en/lcdhs1/Drivers/DriversDetails?driverId=DPNV9>. This will install the required drivers to make the touch functionality work. The driver will want prompt you to reboot after installing.
6. Once the driver is installed you should have a green chain link icon in your system bar. Click the icon, then Calibration, Auto.

7. To power down the projector hit the power button on the remote 2 times.
8. If you have questions, please contact oet-help@udel.edu.
