

# How to Connect to an OET Share Using a MAC

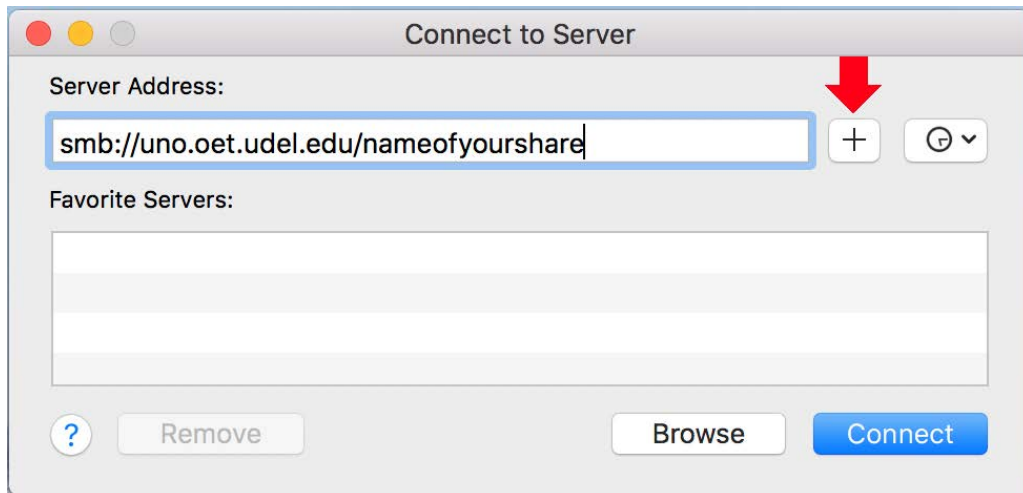

Please note: On campus, if you have a laptop, you will need to be on the Eduroam wireless access point or use a hard-wired Ethernet connection to reach the OET network. Instructions for connecting to Eduroam can be found here <http://www1.udel.edu/it/help/connecting/eduroam/>.

Off campus, you will need to download, install, and connect to Cisco's AnyConnect first using your UDeI Net ID and password. The VPN may be downloaded from <https://udeploy.udel.edu/software/anyconnect-vpn/>. The UD VPN substitutes for Eduroam off campus.

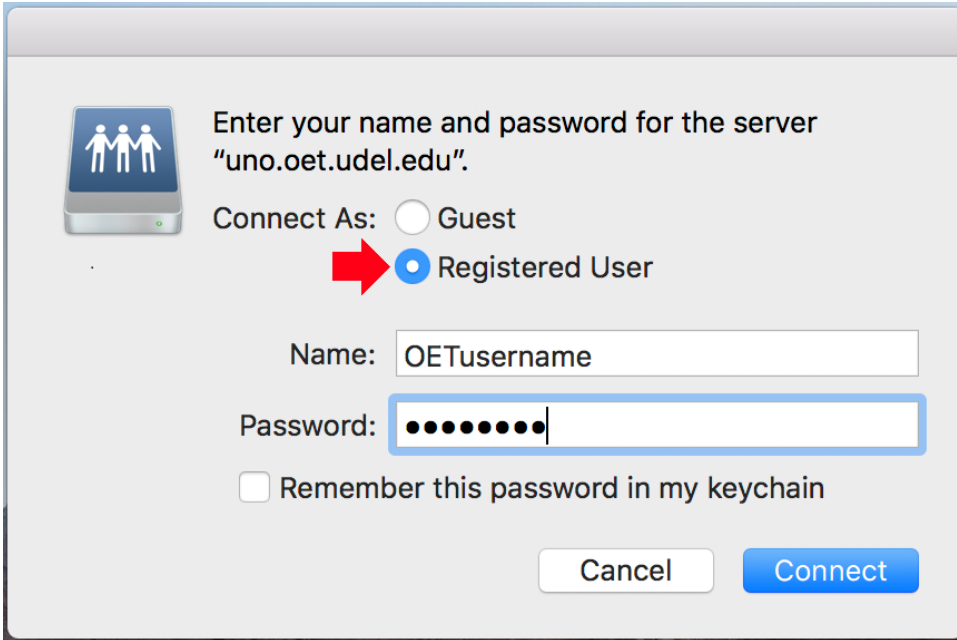

1. Once you are on the OET network, from the **Finder** desktop, select the **Go** menu and select **Connect to Server**.

2. In the **Server Address** box, type **smb://uno.oet.udel.edu/nameofyourshare**, as shown below (e.g., **smb://uno.oet.udel.edu/soe**). Ask an OET staff member for your file path, if you do not know the server's name. Click the **+** button to save the name of the server in your Favorite Servers. Click **Connect**.

3. An authentication window may appear in order to connect to the share. If it does, click the radio button for **Registered User**. Enter your **OET** username and password in the **Name** and **Password** fields. Then click **Connect**. A window will appear that lists the files you potentially have access to.

4. You will see an icon for this share appear on your desktop. You can click twice to open it and view your files.

5. If you do not see an icon appear on your desktop, go to the **Finder** menu and click on **Preferences**.

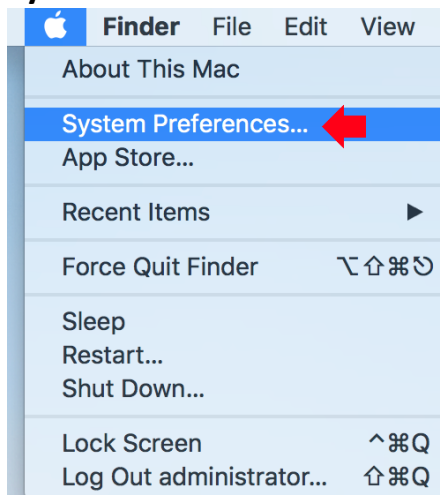

6. In the **Find Preferences** window, check the box for **Connected Servers** under **Show these items on the desktop**. This will add the

Share icon to your desktop.

**OPTIONAL:**

7. Once the Share is on your desktop, you can drag it to your login items so that, when on-campus, you can have the authentication window for it appear automatically after you boot your machine.
8. Go to the Apple menu icon, top left hand corner of your screen, and select **System Preferences**.

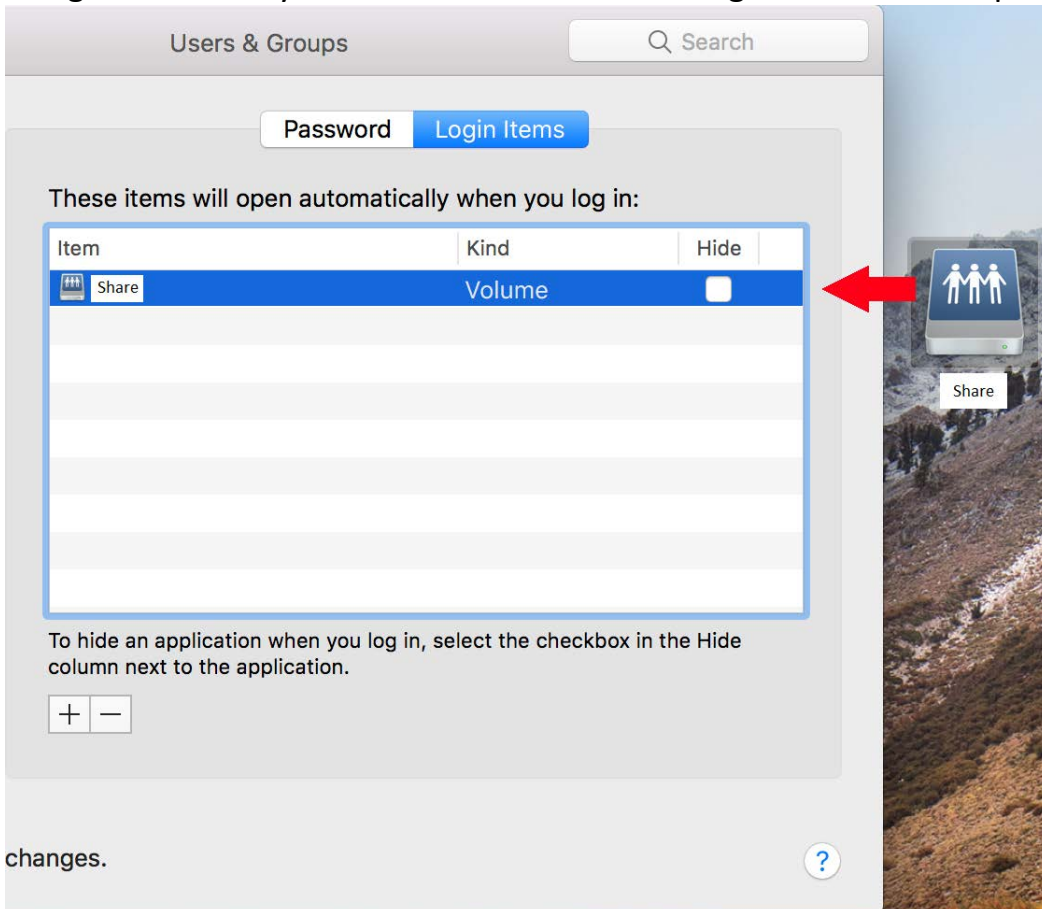

9. In the **System Preferences** window, click on the **Users & Groups** icon.

10. Highlight your account and click on **Login Items**.

11. Drag the icon for your OET network share to Login Items and drop it.

12. When you login to your mac, if you are not connected to the UD network via Ethernet or wireless, you will not be able to connect to a share automatically and will receive an error message. In this case, click **OK** to

close the window. You can still connect to the share when connected to the internet on any other network by using the Cisco Anyconnect VPN software.
